RESEARCH INTERESTS

- Multi-document understanding: Enabling machines to reason over and synthesize dispersed information from multiple documents, e.g., summarization of or numerical reasoning over multiple scientific articles
- Reasoning model post-training: Develop effective and efficient post-training techniques for reasoning models to build advanced long-context foundation models and autonomous agents that can correlate and integrate voluminous, heterogeneous, and distributed information
- Language model evaluation: Establishing controlled experimentation and rigorous evaluation methodologies to assess not only language model outputs but also their inner workings and behaviors to understand their real-world capabilities

TECHNICAL SKILLS

- Proficient in problem formulation, large-scale data curation, modelling and evaluation methodologies for advanced natural language reasoning and generation tasks
- Experienced in post-training and experimentation with large language models (LLMs), especially for tasks involving complex contexts (e.g., multi-document question answering)
- Skilled in Python and PyTorch, with hands-on experience in large-scale model training and efficient inference of LLMs (leveraging modern frameworks such as Transformers, OpenRLHF and vLLM)
- Solid theoretical foundation in natural language processing, deep learning and fundamental statistical machine learning, with particular emphasis on language modelling, text generation and distributed computing
